## **I Introduction**

### **I.1 General**

PJA Engineering has been instructed by Brookgate Land Ltd to prepare a Phase 1 geo-environmental desk study to assist with planning applications for the proposed development at Land off Milton Avenue, Cambridge North, herein referred to as 'the Site'.

### **I.2 Development Proposals**

The Proposed Development at the Site comprises office space and laboratory buildings with ground floor amenity uses, residential units, basement car parking, a Network Rail compound, and associated landscaping, public realm, parking and infrastructure.

### **I.3 Scope of Works**

The preparation of this Phase 1 geo-environmental desk study includes:

- Review of geo-environmental and regulatory information and historical maps in a Landmark Envirocheck report;
- Review of available geo-environmental reports for the Site and the surrounding area;
- Establishing the geo-environmental setting, historical development, geology, hydrogeology, hydrology and regulatory context;
- Identification of sources, pathways and receptors and preparation of a conceptual Site model to establish potential contaminant linkages;
- Completion of a preliminary qualitative risk assessment for the identified potential contamination linkages;
- A summary of key ground engineering constraints which may affect the proposed development and which may need to be accounted for in the development masterplan; and
- Recommendations for further work to investigate potential contaminant linkages and ground engineering constraints.

### **I.4 Limitations**

Where information and data has been used in preparation of this report and has been either provided to PJA or prepared by third parties, PJA accepts no responsibility for the accuracy or completeness of that information.

Further details of the report limitations are presented in Appendix C.

## 2 Sources of Information

The sources of information used in preparing this desk study are listed in Table 2-1.

\* N.B. This uses a different red line boundary to the current site boundary, however the information contained within the Envirocheck Report is considered sufficient for the purposes of this desk study.

## 3 Site Location & Description

### 3.1 Site Location

The Site occupies land at the former Chesterton Sidings, located approximately 3km to the north east of Cambridge City Centre.

The Site is bound to the north by the remainder of the former Chesterton Sidings, to the east by a railway line constructed at grade, to the south by a hotel and to the west by Cambridgeshire Guided Busway and Cambridge Business Park.

The Ordnance Survey grid reference for the approximate centre of the Site is 547538, 260940. The Site boundary is shown on Drawing 239-ACME-S00-0000 presented in Appendix A.

### 3.2 Site Description

#### 3.2.1 Current Site Use

The Site is currently occupied by an existing open air car park, areas of hardstanding, vacant land with a cover of compacted hardcore and scrub vegetation, part of Cowley Road and Milton Avenue.

The Cambridgeshire Guided Busway runs in an approximate north to south through the far western extent of the Site. The First Public Drain adjoins the north western boundary of the Site.

#### 3.2.2 Topography

The Site is generally flat at an elevation of approximately 8mAOD.

## 4 Historical Development

### 4.1 Historical Maps

Historical maps included in the Landmark Envirocheck Report, presented in Appendix B, have been reviewed to establish the historical development of the Site and surrounding area to a distance of 500m. The findings are summarised in Table 4.1.

**Table 4.1: Historical Development of the Site and Surrounding Area**

Date	Site	Surrounding Area
1886-1888	The Site is largely unoccupied with the exception of the Cambridge & St. Ives Branch railway line which passes along the route of the Cambridgeshire Guided Busway in the south west of the Site.	<p>The surrounding area is largely occupied by undeveloped fields.</p> <p>'First Public Drain' passes along the current alignment of Cowley Road as far as the north western Site boundary and 'Nineteenth Public Drain' joins 'First Public Drain' to the north west of the Site.</p> <p>The Cambridge Line railway is located approximately 25m to the east of the Site and runs parallel to the eastern Site boundary. Chesterton Junction is located approximately 300m to the south of the Site where the Cambridge Line and Cambridge &amp; St. Ives branch meet.</p> <p>A triangular-shaped pit is present approximately 40m to the east of the Site, beyond the Cambridge Line, and a gravel pit is present approximately 100m to the east of the Site.</p> <p>A Brick Works and kiln is located approximately 400m and 450m south east of the Site.</p>
1902-1903 1904	<p>Railway sidings pass through the Site from south to north and associated ballast pits are present in the north east of the Site.</p> <p>Rough pasture is present in the southern and central areas of the Site.</p> <p>A strip of marshy ground is present in the south eastern corner of the Site.</p>	<p>The gravel pit 100m to the east of the Site is no longer present and may have been infilled.</p> <p>The kiln is no longer present at the Brick Works 450m to the south east of the Site.</p> <p>A gravel pit is present approximately 150m to the south east of the Site.</p> <p>A sewage farm is located approximately 300m to the north of the Site at its closest point.</p>
1926 - 1927	<p>The ballast pits are no longer present on Site and the area is covered by marshy ground, rough pasture and scattered trees. The railway sidings passing through the Site from south to north have reduced in number.</p> <p>Three railway sidings pass through the south west of the Site running parallel with the Cambridge &amp; St Ives railway line.</p>	<p>Reeds are shown at the triangular-shaped pit.</p> <p>The gravel pit is no longer present approximately 150m to the south east of the Site and may have been infilled.</p> <p>Gravel pits are located approximately 200m to the south of the Site and adjacent to the western boundary of Trinity Hall Farm.</p> <p>A pumping station is present approximately 180m to the south of the Site.</p> <p>The Brick Works located approximately 400m south east of the Site is no longer recorded as present however a pit remains in this location.</p> <p>The Nineteenth Public Drain is no longer present and sludge beds associated with the sewage farm appear to extend to the north western boundary of the Site.</p> <p>Long Beach Nurseries is present approximately 400m to the south of the Site.</p>

Date	Site	Surrounding Area
1938-1952	One rectangular building is present in the south of the Site.	Two square buildings are located adjacent to the southern boundary of the Site and a third square building is located close to the western boundary of the Site. These appear to be associated with the railway sidings.
1952-1953	Multiple railway sidings have been constructed on the Site aligned south to north.	Residential development has taken place to within 240m of the west of the Site. No other significant changes noted.
1958-1959	No significant changes on Site.	No significant changes.
1969 - 1971	Multiple railway sidings have been constructed on the Site aligned south to north, covering the majority of the Site.  Travelling cranes are located in the centre and north east of the Site.  An electricity substation is present in the centre of the Site and a 'central materials depot' is located close to the northern boundary of the Site.	Residential areas have expanded to the west, south west and south of the Site. The gravel pit and pumping station to the south of the Site are no longer present.  The triangular-shaped pit is shown as a pond. Works and an industrial estate are shown approximately 230m to the south west of the Site, around the location of the current Cambridge Business Park.  The gravel pit located 200m to the south of the Site is no longer shown and may have been infilled.  A pond is labelled approximately 280m to the north east of the Site.  Allotment gardens are located adjacent to the western boundary of the Site.
1979 - 1980	No significant changes on Site.	Cowley Road has been constructed to the north west of the Site parallel with the First Public Drain.  Filter beds, settling tanks and a pump house are located approximately 250m to the north of the Site at their closest point, associated with the sewage works.
1982 - 1985	No significant changes on Site.	The industrial estate extends to within 150m of the west of the Site. An Agricultural Machinery Market and depots are present in the area of former sewage beds.
1988	No significant changes on Site.	No significant changes.
1992	No significant changes on Site.	Various depots and works extend north west from the Site boundary, off Cowley Road. Caravan Park Industrial Estate has been built approximately 70m to the south east of the Site at its closest point.
2000	No significant changes on Site.	The Agricultural Machinery Market has been relabelled as a Golf Driving Range. A Caravan Park is located approximately 300m to the east of the Site.
2003	The main railway line running through the far south west of the Site is no longer present.	A Park and Ride is present next to the Golf Driving Range.
2009	There are a reduced number of railway sidings in the western and central areas of the Site.	No significant changes noted.

## 4.2 Unexploded Ordnance

Unexploded ordnance (UXO) risk maps published by Zetica indicates the Site is in a low risk zone.

## 5 Geo-environmental Site Setting

### 5.1 Published Geology

#### 5.1.1 Made Ground

A review of published British Geological Survey (BGS) mapping shows that Made Ground ('infilled ground') is not recorded at the Site. However, Made Ground may be present associated the Site's historical use.

#### 5.1.2 Superficial Deposits

Published geological mapping indicates the majority of the Site is underlain by River Terrace Deposits described as '*sand and gravel, locally with lenses of silt, clay or peat*'. Superficial Deposits are indicated to be absent from the northern and eastern extents of the Site.

#### 5.1.3 Bedrock

Bedrock of the Gault Formation underlies the entirety of the Site and is generally described by the BGS as '*pale to dark grey or blue-grey clay mudstone, glauconitic in part, with a sandy base*'.

### 5.2 Mining

The Envirocheck Report indicates the Site does not lie within a coal mining reporting area.

Historical maps and records included in the Envirocheck report show that ballast pits were present in the north east of the Site. The Envirocheck Report also indicates that there are eight BGS Recorded Mineral Site within 250m of the site. Two active sites are operated by Tarmac Ltd and Frimstone Ltd in the area extending directly to the north of the Site at the former Chesterton Sidings. The commodity for both sites is recorded as crushed rock.

### 5.3 Radon

The Landmark Envirocheck Report indicates that the Site lies within a lower probability radon area as less than 1% of homes are estimated to be at or above the Action Level.

No radon protective measures are necessary in the construction of new dwellings or extensions.

### 5.4 Potential for Geological Hazards

The Landmark Envirocheck Report presents the following geological hazard potential within the Site boundary:

- Potential for Collapsible Ground Stability Hazards: Very low hazard potential;

- Potential for Compressible Ground Stability Hazards: No hazard;
- Potential for Ground Dissolution Stability Hazards: No hazard;
- Potential for Landslide Ground Stability Hazards: Very low hazard potential;
- Potential for Running Sand Ground Stability Hazards: Very low hazard potential to no hazard; and
- Potential for Shrinking or Swelling Clay Ground Stability Hazards: Moderate hazard potential.

## 5.5 Hydrogeology

### 5.5.1 Aquifer Designation

The River Terrace Deposits are classified by the Environment Agency as a Secondary A Aquifer and the Gault Formation is classified as an Unproductive Strata.

The Environment Agency defines Secondary A Aquifers as *'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.'*

### 5.5.2 Groundwater Abstractions

The Site is not located in a groundwater source protection zone.

The Envirocheck Report indicates that there are no licensed groundwater abstractions within 500m of the Site.

### 5.5.3 Flooding

The Envirocheck Report indicates that there is potential for groundwater flooding to occur at the surface across the majority of the Site, and locally along the section of the Cambridgeshire Guided Busway within the Site there is potential for groundwater flooding to occur in property situated below ground level.

## 5.6 Hydrology

### 5.6.1 Nearest Surface Water Features

The nearest surface water feature is the 'First Public Drain' drain that adjoins the north western boundary of the Site. The River Cam is located approximately 500m east of the Site at its closest point.

### 5.6.2 Surface Water Abstraction Licences

The Envirocheck Report indicates that there are no active surface water abstractions within 1km of the Site.

### 5.6.3 Flooding

The Site does not lie within an area at risk of flooding from rivers or seas or from reservoirs.

## **6 Regulatory Review**

### **6.1 Environmental Permits, Incidents and Registers**

### **6.2 Local Authority Prevention and Control**

The Envirocheck Report records four active Local Authority Pollution Prevention and Controls (LAPPC) within 500m of the Site. The closest listed active LAPPC is reported to be located approximately 15m to the north of the Site and is held by Lafarge Redland Aggregates Ltd for the blending, packing, loading and use of cement. The remaining active LAPPC within 500m of the site relate to a printworks and mineral drying and roadstone coating processes.

The Envirocheck records no active Integrated Pollution Prevention and Controls or Local Authority Integrated Pollution Prevention and Controls within 500m of the site.

### **6.3 Discharge Consents**

The Envirocheck Report records seven discharge consents to surface water within 500m of the Site boundary, the majority of which are reported as 'revoked'.

The closest active surface water discharge consent is located approximately 100m to the east of the Site, operated by National Grid Wireless for 'sewage discharge – final-treated effluent' into an unnamed tributary of the River Cam.

The Envirocheck Report indicates there are no active discharge consents to groundwater within 500m of the Site.

### **6.4 Pollution Incidents to Controlled Waters**

The Envirocheck Report indicates there are no recorded pollution incidents to land or groundwater within 500m of the Site.

### **6.5 Prosecutions Relating to Authorised Processes**

The Envirocheck Report records a prosecution relating to the operation of a vehicle dismantling and scrap recovery business without a license at a location approximately 85m to the east of the southern part of the site.

### **6.6 Substantiated Pollution Incident Register**

Two pollution incidents with impact to land are recorded in the Envirocheck Report. A release of sewage materials (final effluent) occurred in March 2006 at a location approximately 400m to the east of the Site, which was classified as a Category 3 Minor Incident in relation to the impact to land. A release of crude sewage occurred in December 2018 at a location approximately 475m to

the east of the Site, which was classified as a Category 2 Significant Incident in relation to the impact to land.

## **6.7 Planning Hazardous Substance Sites**

The Envirocheck Report indicates that there are currently no recorded hazardous substance consents within 500m of the Site.

## **6.8 Landfill and Other Waste Sites**

### **6.8.1 Historical Landfills**

The Envirocheck Report indicated that there are no historical landfills within 1km of the Site.

### **6.8.2 Registered Landfills**

The Envirocheck Report indicated that there are no registered landfills within 1km of the Site.

### **6.8.3 Licensed Waste Management Facilities**

Eight licensed waste management facilities are recorded in the Envirocheck Report within 500m of the Site, three of which are listed as 'surrendered'.

Household, commercial and industrial waste transfer stations and treatment facilities are operated by Veolia 35m to the north east of the site at Cambridge Waste Management Centre, off Cowley Road and by 'O' Connor Nelson' approximately 415m to the north east of the Site.

Cambridge Parts Centre operates an 'end of life vehicles' facility approximately 100m to the east of the Site.

Anglian Water Services Ltd operates two licensed waste management facilities at Cambridge Sewage Treatment Works which is located approximately 200m to the north of the Site at its closest point. One facility is categorised as 'sewage sludge treatment' and one as 'landfill gas engine <3 mW'. There are no corresponding authorised or historical landfills in this location so the reference to 'landfill gas' may relate to the use of the by-products of sewage sludge treatment.

### **6.8.4 Registered Waste Treatment or Disposal Sites**

The Envirocheck Report records two operational registered waste treatment or disposal sites within 500m of the Site.

Cleanaway Waste Management Centre is located off Cowley Road approximately 45m to the north of the Site and is authorised to treat waste including clinical drugs and pharmaceuticals, and drummed and bulk solid and liquid waste. A car breakers is located approximately 270m to the

south east of the Site and authorised waste is recorded as vehicles/parts and associated integral liquids.

## **6.9 Current Land Use**

### **6.9.1 Contemporary Trade Directory Entries**

The Envirocheck Report lists numerous Contemporary Trade Directory entries within 500m of the Site, not all of which are listed as active.

The majority of entries are located either side of Cowley Road to the north west and west of the Site, and to the south west of the Site beyond the railway line.

Key active contemporary trades in the immediate vicinity of the Site comprise a Tarmac aggregates facility which extends to the north of the site across the former Chesterton sidings and alongside the eastern extent of Cowley Road, and a Veolia recycling facility located approximately 125m to the north west of the Site which is understood to handle commercial waste.

Other active contemporary trades located within 250m of the Site comprise commercial and light industrial trades including garage services, various engineering and manufacturing facilities, domestic and commercial cleaning services, and printers.

### **6.9.2 Fuel Stations**

There are no fuel stations recorded within 500m of the Site.

## **6.10 Designated Environmentally Sensitive Areas**

Bramblefields Local Nature Reserve is located directly adjacent to the south western part of the Site.

There are no Site of Special Scientific Interest within 1km of the Site.

## 7 Available Report

### 7.1 Cambridge North Development Phase IA and IB, Factual Report on Ground Investigation, SOCOTEC, November 2017, Report No. E7030

A ground investigation scoped by Mott MacDonald was undertaken by Socotec in August 2017 on part of the Site. Six cable percussion boreholes and 13 dynamic windowless samples were located in the western half of the Site, with no coverage across the remainder of the Site.

Based on exploratory hole locations within the Site boundary, geology beneath the site comprised Made Ground underlain by River Terrace Deposits (gravelly sands and clays) and Gault Formation (clay). Made Ground was encountered in all exploratory hole locations to depths of between 0.45m and 3.20m as black, occasionally reddish-brown gravelly ash, sand, and occasional clay. Gravels included mudstone, flint, chert, quartzite, coal and slate and anthropogenic materials such as railway ballast, clinker, glass, metal, macadam, concrete, brick, timber, ceramic, rubber and fabric.

River Terrace Deposits were encountered underlying Made Ground in all but six exploratory hole locations, at thicknesses ranging from 0.2m to 2.0m. Bedrock of the Gault Formation was encountered to a maximum depth of 30.35m, however the base of the formation was not proven. Water strikes occurred between 0.80m and 2.60m in Made Ground and River Terrace Deposits.

The exploratory hole logs indicate that visual or olfactory evidence of contamination was generally absent, except for a faint hydrocarbon odour observed towards the base of the Made Ground and a maximum photo-ionisation detector reading of 1.1 parts per million in Made Ground, both in boreholes located in the south west of the former rail sidings.

Contaminant concentrations were not recorded above human health generic assessment criteria (GAC) for a commercial end use in the soil samples analysed. Single exceedances were recorded of the lead and dibenzo(a,h)anthracene GAC for a residential without consumption of homegrown produce end use in the proposed residential Site area. No asbestos was identified during laboratory analysis of soil samples. Metals, phenol and PAH compounds were recorded at concentrations above the respective EQS in soil samples selected for soil leachate laboratory analysis. Metals and PAH were recorded at concentrations above the respective EQS in groundwater samples. Benzo(a)pyrene was recorded locally above the DWS in soil leachate and groundwater samples.

Available gas monitoring data for eight of the eleven exploratory holes within the Site boundary indicates hazardous gas flow rates (Q<sub>hg</sub>) of between 0.0001 l/hr and 0.039 l/hr for carbon dioxide and between 0.0001 l/hr and 0.0016 l/hr for methane, in accordance with BS 8485:2015+A1:2019. These equate to a Characteristic Situation 1, although with carbon dioxide recorded at concentrations above 5%, at a maximum of 13%, BS 8485:2015+A1:2019 suggests considering an increase to Characteristic Situation 2.

## 8 Conceptual Site Model

Based on the information summarised in the preceding sections of this report, this section presents the sources of potential contamination, receptors to potential contamination and pathways between the two. The Conceptual Site Model has been developed using this commonly adopted source-pathway-receptor model, as recommended in Land Contamination: Risk Management published by the Environmental Agency in 2020.

Where contamination sources, receptors, and pathways are present, these are referred to as potential contaminant linkages.

A preliminary assessment of the risk posed to identified receptors from potential on-Site and off-Site contamination sources has been made for each potential contaminant linkage, based on the information available at the time of writing this report.

### 8.1 Potential Sources of Contamination

#### 8.1.1 On-Site

On-Site potential sources of contamination are considered to comprise:

- Operation of mechanical plant and equipment associated with the materials depot, railway sidings and travelling cranes.
- Made Ground of unknown provenance associated with the development of the railway sidings and backfill of historical ballast pits in the north east of the Site.
- Transformer oils associated with the historical electricity substation in the centre of the Site.
- Existing highways, the guided busway and a car park associated with the Cambridge North Railway station which are sources of potentially contaminated surface run-off.

As a result of these land uses, it is possible that soil and groundwater at the Site may be contaminated with a range of contaminants including metals, sulphates, fuels, oils and grease (Total Petroleum Hydrocarbons), Polycyclic Aromatic Hydrocarbons (PAH), phenols, and polychlorinated biphenyls (PCB) if uncontrolled releases to ground have occurred.

Asbestos may have been used in the structures formerly located on Site, and may be present in soils at the Site as a result of historical maintenance or demolition works.

The generation of methane, carbon dioxide and other gases may be ongoing if putrescible materials are present in Made Ground associated with the historical development and use of the site including backfilled ballast pits, railway sidings and a material depot.

### 8.1.2 Off-Site

The key off-Site potential sources of contamination are considered to comprise:

- Aggregates facility extending northwards from the Site which utilities mechanical plant and equipment.
- Historical Sewage Farm including filter beds, now Cambridge Water Recycling Centre.
- A range of historical and current depots, works, light industrial units, engineering and garage facilities.
- Railway line parallel to the eastern site boundary and Cambridge North railway station to the south of the Site.
- Former Agricultural Machinery Market to the north west of the Site which is assumed to have historically stored mechanical plant and equipment. This area is now in use as a golf driving range.
- Former gravel pits and ponds, located 40m from the Site at the closest point, which may have been infilled with materials of unknown provenance.
- Licensed waste transfer and treatment facilities, reported to handle household, commercial and industrial waste.

Potential contaminants associated with these off-Site land uses could include metals, sulphates, TPH, PAH, solvents and phenols if uncontrolled releases to ground have occurred.

The former sewage farm and current sewage works is a potential source of metals, other inorganics, pathogens, TPH and gases.

The generation of methane, carbon dioxide and other gases may be ongoing if putrescible materials are present in Made Ground associated with infilled pits and ponds.

## 8.2 Potential Pathways

### 8.2.1 Human Health

Regarding the assessment of risk to human health, the following pathways are considered to be potential exposure routes based on a proposed mixed end use:

- Ingestion of contaminants in soil and soil-derived dust;
- Dermal contact with contaminants in soils and soil-derived dusts where soils (and contaminants) are exposed at the surface;
- Inhalation of contaminants in soil-derived dusts from areas where soils (and contaminants) are exposed at the surface; and
- Inhalation of soil-derived and groundwater-derived vapours and/or ground gas.

### 8.2.2 Controlled Waters

The following pathways for the migration of contamination to controlled waters are considered applicable:

- Leaching and migration of contaminants from soils in the unsaturated zone into groundwater in the underlying superficial Secondary A Aquifer;
- Migration of contaminants via preferential pathways such as piles to groundwater in the underlying aquifer Secondary A Aquifer;
- Lateral migration of contaminants in groundwater through soils and bedrock with discharge to surface water as base flow; and
- Migration of contaminants along preferential pathways such as installed services followed by discharge to surface watercourses.

### 8.2.3 Property

The following pathways are considered applicable for property receptors:

- Direct contact of on-Site property with contaminants in soils, perched water and/or groundwater;
- Direct contact of off-Site property with contaminants in migrating perched water and/or groundwater; and
- Lateral/vertical migration of gas through soils followed by accumulation in enclosed spaces leading to potentially explosive conditions.

## 8.3 Potential Receptors

Potential receptors to contamination are presented in Table 8-1, based on an assumed mixed use development of the Site.

**Table 8-1: Potential Receptors**

Receptor Type	Description
Human Health	Current users of open air car park, future residents, future workers at and visitors to on-Site commercial properties and rail compound
	Current and future occupants of and visitors to off-Site commercial and residential properties
	Members of the public using off-Site areas of open space
	Construction and maintenance workers
Controlled Waters	Groundwater in Secondary A Aquifer
	Surface water in the First Public Drain and the River Cam and future on-Site drainage features
Property	Current and future on-Site buildings, foundations and services
	Current and future off-Site buildings, foundations and services

Whilst construction and maintenance workers are considered to be potential receptors to contamination, their exposure is considered to be acute based on the generally short duration of their work.

Land contaminated risk assessment is based on chronic risks associated with exposure to contamination over a longer period of time, therefore risks to construction and maintenance workers are not considered in the conceptual site model.

## **8.4 Preliminary Conceptual Site Model and Risk Assessment**

Based on the information currently available, potential contaminant linkages have been identified and a preliminary risk assessment has been undertaken for the Site. The estimation of the potential significance of each linkage is based on the nature of the proposed development, the presence and mobility of potential contaminants and the plausibility of the identified migration/exposure pathways.

The preliminary risk assessment was undertaken in accordance with the risk matrix set out in CIRIA C552 and is presented in Table 8-2. Risk Classification used to inform the preliminary risk assessment is presented in Appendix D.

**Table 8-2: Conceptual Site Model and Preliminary Risk Assessment**

Pollutant Linkage	Potential Source	Key Contaminants	Pathway	Receptor	Probability	Consequence	Risk Without Mitigation	Comment
1	<p><u>On-Site</u></p> <p>Operation of mechanical plant and equipment associated with the materials depot with associated railway sidings and travelling cranes.</p> <p>Made Ground of unknown provenance associated with the development of the railway sidings and backfill of historical ballast pits in the north east of the Site.</p>	Metals, sulphates, asbestos, TPH,PAH, phenols and PCBs.	<p>Dermal contact with and/or ingestion of contaminants in soil and soil-derived dust</p> <p>Inhalation of contaminants in soil-derived dust</p> <p>Inhalation of soil-derived and groundwater-derived vapours</p>	Human – occupants of future on-Site residential properties	Low Likelihood	Medium	Moderate/low	<p>The Site is mostly unoccupied at present, with areas of hardstanding associated with developed areas of the Site. The proposed residential development will comprise a combination of building cover, hardstanding and a central landscaped communal garden.</p> <p>The nature of the proposed development means there is potential for direct contact with contaminants in shallow soils and for inhalation of vapours associated with volatile contaminants which may be presented in the soil and shallow groundwater as a result of the current and historical use of the Site. Available laboratory analytical data for the residential part of the Site indicates soils may be largely suitable for retention in a residential development, with a single exceedance recorded of the respective GACs for lead and dibenzo(a,h)anthracene.</p> <p>Ground investigation can be used to further establish if contamination is present which may pose an unacceptable risk to on-Site human receptors.</p>
2	<p>Transformer oils associated with the historical electricity substation in the centre of the Site.</p> <p>Existing highways,</p>			Human – current users of open air car park and future workers at and visitors to on-Site commercial properties	Low Likelihood	Medium	Moderate/low	<p>The Site is mostly unoccupied at present, with areas of hardstanding associated with developed areas of the Site. The proposed commercial development will comprise mostly hardstanding and building cover with peripheral areas of soft landscaping and drainage features.</p> <p>There will be little potential for direct contact with contaminants under the proposed use of the Site. There is potential for indoor inhalation of vapours associated with volatile contaminants which may be presented in the soil and shallow groundwater as a result of the current and historical use of the Site. However, available laboratory</p>

Pollutant Linkage	Potential Source	Key Contaminants	Pathway	Receptor	Probability	Consequence	Risk Without Mitigation	Comment
	the guided busway and a car park associated with the Cambridge North Railway station. which are sources of potentially contaminated surface run-off							analytical data for part of the Site suggests no unacceptable risks to human health under a commercial end use. Ground investigation can be used to determine if contamination is present at the remainder of the Site which may pose an unacceptable risk to on-Site human receptors.
3				Human – occupants of and visitors to off-Site residential and commercial properties and members of the public using off-Site areas of open space	Unlikely	Medium/Low	Low	Made Ground has previously been identified at the Site. Available laboratory analytical data for part of the Site suggests no unacceptable risks to human health under a commercial end use, and it is considered unlikely that there is an ongoing impact to off-Site receptors. However, future ground investigation and laboratory analysis will establish the presence and levels of mobile contamination which has the potential to be migrating to the identified off-Site receptors.
4				Leaching and migration of contaminants from soils in the unsaturated zone into groundwater Migration of contaminants via preferential pathways such as piles to groundwater	Controlled waters – groundwater in Secondary A Aquifer	Low Likelihood	Medium	Moderate/Low

Pollutant Linkage	Potential Source	Key Contaminants	Pathway	Receptor	Probability	Consequence	Risk Without Mitigation	Comment
								and groundwater are largely below DWS, with exception of benzo(a)pyrene. Ground investigation will be carried out to determine the presence of contaminants in unsaturated soils which have the potential to leach to groundwater, and which may migrate downward to groundwater via preferential pathways such as piles. Subsequent groundwater sampling can be used to characterise the current groundwater quality.
5			Lateral migration of contaminants in groundwater through soils and bedrock with discharge to surface water as base flow  Migration of contaminants along preferential pathways such as installed services followed by discharge to surface watercourses	Controlled waters – surface water in First Public Drain and River Cam, future on-Site drainage features	Low Likelihood	Medium	Moderate/Low	Potentially contaminative activities and backfill of historical ballast pits have been identified at the Site and based on the underlying geology, it is possible that contaminants have leached/have the potential to be leaching to groundwater underlying the site which may discharge to surface waters as base flow. Available laboratory analytical data indicates recorded concentrations of metals, PAH and phenol above EQS in soil leachate and metals and PAH concentrations above EQS in groundwater.  Ground investigation and subsequent groundwater sampling will be carried out to determine the presence of contaminants in unsaturated soils and in groundwater which have the potential to impact on surface waters.
6			Direct contact with contaminants in soils, perched water and/or groundwater	Current and future on-Site buildings, structures, foundations and services	Likely	Minor	Low	The Site is largely underlain by sulphate-bearing bedrock which may result in aggressive ground conditions which pose an unacceptable risk to concrete. Testing in accordance with BRE SD1 should be carried out as part of future ground investigation across the Site.  Elevated concentrations of organic contaminants in the ground could present a risk to new services and potable water supply pipework. Laboratory analytical data from

Pollutant Linkage	Potential Source	Key Contaminants	Pathway	Receptor	Probability	Consequence	Risk Without Mitigation	Comment
								ground investigation can be used to inform the requirement for protection of services.
7			Direct contact with contaminants in migrating groundwater	Current and future off-Site buildings, foundations and services	Low likelihood	Minor	Very Low	Based on the underlying geology, contaminants may have leached from unsaturated soils on-Site and may be migrating off-Site in groundwater.  Future ground investigation and laboratory analysis can be used to establish the presence and levels of mobile contamination which has the potential to be migrating to the identified off-Site property receptors.
8	<u>On-Site</u> Made Ground of unknown provenance associated with the development of the railway sidings and backfill of historical ballast pits in the north east of the Site	Methane, carbon dioxide and other gases	Lateral/vertical migration through soils followed by accumulation in enclosed spaces and inhalation	Human – current users of open air car park, future residents, future workers at and visitors to on-Site commercial properties, current and future occupants of and visitors to off-Site residential and commercial properties	Low likelihood	Medium	Moderate/Low	Backfill in historical ballast pits may be releasing landfill gas if putrescible materials are present which may currently preferentially migrate upwards with release to the atmosphere.  Available gas monitoring data indicates generally low Gas Screening Values, representative of Characteristic Situation 1 or 2. However the monitoring installations were not situated in the area of the former ballast pits and the calculated GSV may not be representative of the gas regime at the Site as a whole.  Ground investigation targeting the ballast pits and the surrounding areas and further gas monitoring will be required to quantify the level of risk and inform the requirement for potential gas protection measures in the proposed development.

## 9 Engineering Constraints

Based upon the information available, the following potential engineering constraints have been identified within the Site and may need to be taken into account as part of any proposed redevelopment. This list should not be considered exhaustive.

### 9.1 Made Ground

Made Ground has previously been identified at the Site associated with its historical use as a materials depot and railway sidings. In addition, historical maps suggest the backfilling of on-site historical ballast pits has taken place and the provenance, depth and nature of Made Ground in these areas may vary. Due to the inherent variability of Made Ground and the frequently uncontrolled nature of its deposition, it is not recommended to found any structure within Made Ground.

### 9.2 Chemical Attack on Buried Concrete

The underlying bedrock of the Gault Formation may give rise to sulphate-rich aggressive ground which can result in chemical attack on buried concrete. Ground investigation should allow for laboratory analysis in accordance with BRE SD1 to provide the data required for an initial assessment of the appropriate design class of concrete for future development at the Site.

### 9.3 Shrinking or Swelling Clay Ground Stability

The Envirocheck Report suggests there is locally a moderate shrinking or swelling clay ground stability hazard at the Site. Soft compressible deposits are unlikely to be suitable founding strata and the settlement risk associated with these deposits may require assessment.

## 10 Conclusions and Recommendations

### 10.1 Conclusions

The desk study has identified a range of potentially contaminative land uses at the Site and in the surrounding area.

On-Site potential sources of contamination include infilled historical ballast pits in the north east of the site and later, a materials depot and railway sidings with infrastructure including travelling cranes. The key off-Site potential sources of contamination include the aggregates facility extending northwards from the Site, the historical sewage farm and current water recycling centre, backfilled pits and ponds, railway infrastructure, a range of historical and current depots, works, light industrial units, engineering and garage facilities and various licensed waste transfer and treatment facilities. Based upon the information available, a range of organic and inorganic contaminants may be present in soils and groundwater at the Site.

**Table 10-1: Preliminary Risks to Identified Receptors**

Receptor Type	Description	Preliminary Risk Level
Human Health	Current users of open air car park, future residents, future workers at and visitors to on-Site commercial properties and rail compound	Moderate/Low
	Current and future occupants of and visitors to off-Site residential and commercial properties and members of the public using off-Site areas of open space	Moderate/Low to Low
	Construction and maintenance workers	N/A - acute risk to construction and maintenance workers not assessed.
Controlled Waters	Groundwater in Secondary A Aquifer	Moderate/Low
	Surface water in First Public Drain, River Cam, future on-Site drainage features	Moderate/Low to Low
Property	Current and future on-Site buildings, foundations and services	Moderate/Low to Very Low
	Current and future off-Site buildings, foundations and services	Moderate/Low to Very Low

### 10.2 Recommendations

It is recommended that a ground investigation is carried out at the Site to establish ground conditions, to investigate the potential contaminant linkages identified in the preliminary conceptual site model and to provide the empirical data required to refine the land contamination risk assessment.

The scope of the proposed ground investigation should be designed to:

- Target the identified potential on-Site sources of contamination to determine the presence or absence of contaminants in soil and groundwater;
- Determine whether off-Site sources of contamination have resulted in contamination on the Site via cross-boundary migration;
- Establish the presence (or absence) of contamination at the wider site via non-targeted investigation;
- Confirm the nature of in situ ground conditions across the site, including depth and composition of Made Ground, thickness and engineering properties of superficial deposits and the depth to and engineering properties of weathered and competent bedrock;
- Determine groundwater levels and groundwater quality by installation of monitoring standpipes and implementation of a groundwater monitoring regime; and
- Identify the gas regime at the Site by installation of monitoring standpipes and implementation of a gas monitoring regime within the identified on-Site gas sources and at the Site boundary where off-Site gas sources have been identified.

Ground investigation and any remediation and verification that may be required can be secured via planning condition.

### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

### Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Agency &amp; Hydrological</b>					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1	2	6	11	3
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control	pg 7		2	1	
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 7		5	4	
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 8	Yes			
Pollution Incidents to Controlled Waters	pg 9		6	6	13
Prosecutions Relating to Authorised Processes	pg 13		1		
Registered Radioactive Substances	pg 13		12	6	5
River Quality	pg 17			1	
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points					
Substantiated Pollution Incident Register	pg 17		1		1
Water Abstractions	pg 17		1	4	2 (*4)
Water Industry Act Referrals	pg 20			1	
Groundwater Vulnerability Map	pg 20	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 21	1	n/a	n/a	n/a
Bedrock Aquifer Designations	pg 21	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 21	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences	pg 21		Yes	n/a	n/a
Flooding from Rivers or Sea without Defences				n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 21	5	16	20	21

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Waste</b>					
BGS Recorded Landfill Sites					
Historical Landfill Sites					
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 29		5	3	
Local Authority Landfill Coverage	pg 30	3	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Registered Landfill Sites					
Registered Waste Transfer Sites	pg 31		3		
Registered Waste Treatment or Disposal Sites	pg 32		1	1	1
<b>Hazardous Substances</b>					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					
<b>Geological</b>					
BGS 1:625,000 Solid Geology	pg 33	Yes	n/a	n/a	n/a
BGS Recorded Mineral Sites	pg 33		8	3	3
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability			n/a	n/a	n/a
Man-Made Mining Cavities	pg 35				2
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 35	Yes		n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 36		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 36	Yes		n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 36	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 36	Yes		n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Industrial Land Use</b>					
Contemporary Trade Directory Entries	pg 37		138	34	52
Fuel Station Entries					
Gas Pipelines					
Underground Electrical Cables					
<b>Sensitive Land Use</b>					
Ancient Woodland					
Areas of Adopted Green Belt	pg 57		1	2	1
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves	pg 57	1			
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 57	1		1	
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

- R.D. Bdy. Rural District Boundary
- Civil Parish Boundary

## Ordnance Survey Plan 1:10,000

- Chalk Pit, Clay Pit or Quarry
- Gravel Pit
- Sand Pit
- Disused Pit or Quarry
- Refuse or Slag Heap
- Lake, Loch or Pond
- Dunes
- Boulders
- Coniferous Trees
- Non-Coniferous Trees
- Orchard
- Scrub
- Coppice
- Bracken
- Heath
- Rough Grassland
- Marsh
- Reeds
- Saltings
- Building
- Glasshouse
- Sloping Masonry
- Pylon
- Electricity Transmission Line
- Pole
- Cutting
- Embankment
- Standard Gauge Multiple Track
- Standard Gauge Single Track
- Siding, Tramway or Mineral Line
- Narrow Gauge
- Geographical County
- Administrative County, County Borough or County of City
- Municipal Borough, Urban or Rural District, Burgh or District Council
- Borough, Burgh or County Constituency  
Shown only when not coincident with other boundaries
- Civil Parish  
Shown alternately when coincidence of boundaries occurs
- BP, BS Boundary Post or Stone
- Ch Church
- CH Club House
- F E Sta Fire Engine Station
- FB Foot Bridge
- Fn Fountain
- GP Guide Post
- MP Mile Post
- MS Mile Stone
- Pol Sta Police Station
- PO Post Office
- PC Public Convenience
- PH Public House
- SB Signal Box
- Spr Spring
- TCB Telephone Call Box
- TCP Telephone Call Post
- W Well

## 1:10,000 Raster Mapping

- Gravel Pit
- Rock
- Boulders
- Shingle
- Sand
- Slopes
- General detail
- Overhead detail
- Multi-track railway
- County boundary (England only)
- District, Unitary, Metropolitan, London Borough boundary
- Refuse tip or slag heap
- Rock (scattered)
- Boulders (scattered)
- Mud
- Sand Pit
- Top of cliff
- Underground detail
- Narrow gauge railway
- Single track railway
- Civil, parish or community boundary
- Constituency boundary
- Area of wooded vegetation
- Non-coniferous trees
- Non-coniferous trees (scattered)
- Coniferous trees
- Coniferous trees (scattered)
- Orchard
- Rough Grassland
- Scrub
- Water feature
- MHW(S) Mean high water (springs)
- Telephone line (where shown)
- Bench mark (where shown)
- Point feature (e.g. Guide Post or Mile Stone)
- Site of (antiquity)
- General Building
- Non-coniferous trees
- Coniferous trees
- Positioned tree
- Coppice or Osiers
- Heath
- Marsh, Salt Marsh or Reeds
- Flow arrows
- MLW(S) Mean low water (springs)
- Electricity transmission line (with poles)
- Triangulation station
- Pylon, flare stack or lighting tower
- Glasshouse
- Important Building

## Cambridgeshire & Isle Of Ely

Published 1886 - 1888

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
